# Heating system refill water treatment according VDI 2035 – low-salt operation

Tap water containing many minerals is harmful to the new generation of heating systems. Therefore modern heating systems are filled with demineralized water. The magnetic® Demineralization Cartridge 300 is perfectly designed for the treatment of heating systems refill water.

- + Safe refilling of heating systems with demineralized water according to VDI 2035
- + Suitable for treatment of small heating water quantities
- + No measuring device for capacity monitoring necessary
- + Unbeatable price-performance ratio

# Demineralized Water for the household

Demineralized water is necessary for various household applications. You can take demineralized water from the magnetic® demineralization cartridge with the assembly-kit for any use at any time.

## Various applications:

- + Steam irons
- + Batteries
- + Cleaning of windows, car, upholstery etc. without water spots
- + Air humidifiers
- + Aquarium
- + Spraying of indoor plants

## Practical extras for your cartridge

fresh

exhausted

**The coloured resin indicates when the cartridge is exhausted!**

A “blue-brown” dye of the resin indicates that the cartridge is fresh and has its full capacity, whereas a fade of the dye to “white-brown” indicates that the cartridge is fully exhausted.

**You can tap demineralized water directly from the water tap with the magnetic assembly-set.**

Convenient bracket with ball-valve tap.

- + **Cartridge always ready-for-use by wall-mounted installation.**
- + **Simple replacement of “old” with “new” cartridge.**

Consider DIN EN 1717
